

APPLICATION

A/C Filter

OVERVIEW

The activated carbon filter is a very effective method of removing organic matter, taste, odor, color and contaminants. The effectiveness of absorbing and removing any contaminants is maximized when the PH value is low the system uses extremely fine activated carbon particles.

FEATURES

- High removal rate of non-biodegradable organic matters
- High removal rate of odor, taste and color dissolved in the water
- Easy operation due to automatic operation
- One of the most effective and essential process for ion pure water treatment system
