

APPLICATION

Clarifier

OVERVIEW

Clarifiers involve adding metal coagulation substances for floating solids and particulates to form precipitate and allow them to settle to the bottom rapidly. When certain amount of sludges, the concentrated impurities, are collected at the bottom, clarifiers will dispose at time intervals.

Clarifiers work most effectively under the circumstances where influent water quality and effluent water quantity stay constant.

FEATURES

- Efficiently removes floating solids and precipitates
- Expedites filtering and treatment process
- Secures certain effluent water quality standards

PROCESS
