

APPLICATION

F Removal System

OVERVIEW

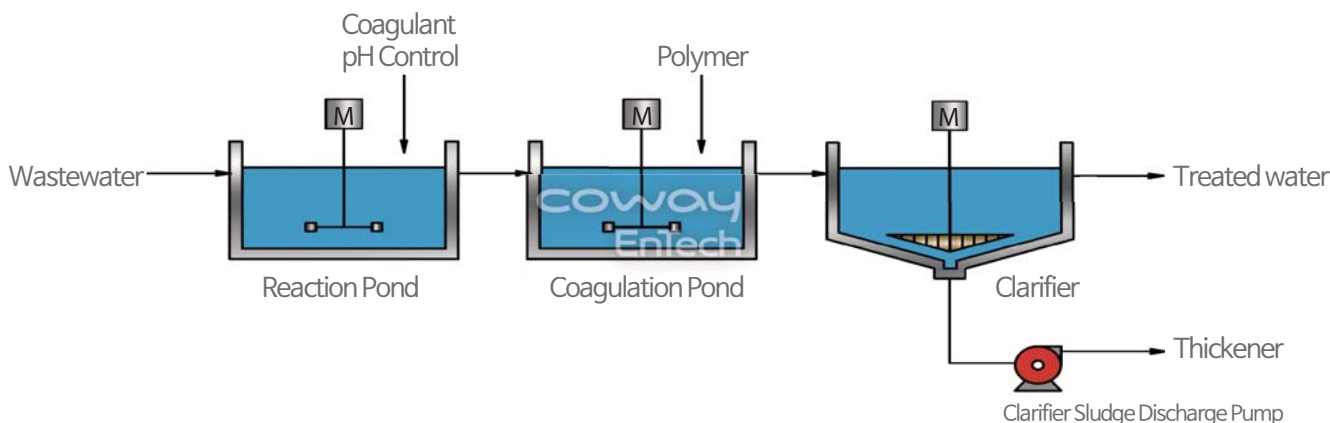

This application is to remove fluorine dissolved in the water. Reducing amount of fluorine contained in the water will prevent water pollution in the region. When designing the removal system, amount of fluorine contained in the water will be considered in order to eliminate them most effectively and efficiently.

FEATURES

Securing effluent quality with combination of biological and chemical treatment processes. Delivering compact system with micro-organism growing media attached.

PROCESS

for high concentration

for low concentration
